Summary

Since I finished my education in vocational high school in 2016, I have worked on several projects. For over 3 years, I have been using web technologies to help companies increase productivity which leads to increased profits. Along with that, I have also worked on several freelance and side projects to date.

I experienced with TypeScript, Node.js, PostgreSQL, JavaScript, Vue.js, HTML, and CSS.

My main focus in web development is simplicity, stability and performance. The code I wrote is easy to maintain and scale. I did that because I wanted to create the best web experience possible.

Experience

Freelance Web Developer
